Root Cause Ranking

	cause	score
0	Database unavailable	
1	SQL or query error	
2	Connection pool exhausted	
3	Database latency	

Explainable RCA

- Dominant failure category is DATABASE, so RCA candidates were restricted to that failure family.
- PaymentService has the highest observed error count and is therefore the most affected service.
- The selected root cause 'Database unavailable' has the strongest combined rule, anomaly, frequency, temporal and dependency score.
- Errors are temporally concentrated, supporting a common incident rather than unrelated isolated events.
- PaymentService: evidence connection timeout, database connection; anomaly score 0.141.
- PaymentService: evidence database unavailable; anomaly score 0.0.
- PaymentService: evidence sql error; anomaly score 0.932.
- PaymentService: evidence connection timeout; anomaly score 0.485.
- PaymentService: evidence timeout to database; anomaly score 0.485.

Anomalous / Important Logs

	timestamp	service	category	message	anomaly
0	2026-08-26 10:31:22	PaymentService	DATABASE	Database connection timeout	
1	2026-08-26 10:31:40	PaymentService	DATABASE	Database unavailable	
2	2026-08-26 10:32:10	APIGateway	NETWORK	Connection refused by downstream service	
3	2026-08-26 10:32:30	UserService	MEMORY	Out of memory while processing request	
4	2026-08-26 10:33:05	AuthService	AUTHENTICATION	Authentication failed for user	
5	2026-08-26 10:33:25	PaymentService	DATABASE	SQL error while executing transaction	
6	2026-08-26 10:33:40	APIGateway	NETWORK	DNS failure while resolving service	
7	2026-08-26 10:34:10	UserService	MEMORY	Memory limit exceeded	
8	2026-08-26 10:34:30	AuthService	AUTHENTICATION	Invalid token received	
9	2026-08-26 10:35:05	PaymentService	DATABASE	Connection timeout to database	

Scores are ranking signals, not calibrated probabilities. For real production use, connect validated logs, traces, metrics and service topology.
